

A New Solution to the 'No Growth' Conundrum!

The diagnosis of infections is especially tricky for exotic patients. You may even see microbes under the microscope, but lab results come back without any bacterial or fungal growth. PCR panels can be helpful, but they are limited to only a few certain targets.

Now, imagine screening for all pathogens conveniently in just one test, without having to select specific targets.

That's What the **MiDOG All-in-One Microbial Test** Offers!

MiDOG Detects:

All Bacteria

All Fungi

Antibiotic
Susceptibilities

Detect & Quantify Pathogens including:

- | | | |
|------------------------|------------------------|-------------------------|
| ✓ <i>Mycoplasma</i> | ✓ <i>Fusarium</i> | ✓ <i>Anaplasma</i> |
| ✓ <i>Ureaplasma</i> | ✓ <i>Histoplasma</i> | ✓ <i>Cyanobacterium</i> |
| ✓ <i>Lawsonia</i> | ✓ <i>Nannizziopsis</i> | ✓ <i>Trichophyton</i> |
| ✓ <i>Mycobacterium</i> | ✓ <i>Ophidiomyces</i> | ✓ <i>Chrysosporium</i> |

and much more!
