

# Ultrasound Educational Options

## 3-Day **LIVE** Virtual Training Labs: (22 RACE approved CE credits)

SonoPath offers a **3-day live virtual lab** and all levels of scanners are invited to join. The virtual attendees will have their own dedicated instructor and virtual assistants ready to **answer questions** while you are scanning along with your instructor from the comfort of your own facility.

Virtual attendees will experience the lectures in real time along with in-person attendees at the Andover, NJ Education Facility. We provide the instructor a list of the virtual attendees and their skill set and goals (information provided through a pre-event survey), so that the instructor can pace the wet lab/scanning session appropriately.

## 3-Day **HANDS-ON** Training Labs (22 RACE approved CE credits)

SonoPath® offers 3-day hands-on training labs personalized for each attendee to match each person with the right instructor based on their skill set and goals.

## Online Courses

(RACE approved CE credits with each course)

Courses are divided into stand-alone modules, designed to deliver more manageable, 'bite-size' pieces of information. You'll have unlimited access to purchased courses, making it easy to come back for quick refreshers and as a personal resource library.

These courses are a valuable supplement to our hands-on training, and can also be leveraged as a substitute when hands-on training is not possible.
