

A white dog, Cody, is the central focus of the image. He is a 9-year-old Labrador mix, looking directly at the camera with a happy expression, his tongue hanging out. He is standing in a grassy area with some green plants in the foreground. The background is a soft-focus outdoor setting with trees and foliage.

Pets tell our story best. **Science proves it.**

“I started Cody on Duralactin® Canine Joint Plus Soft Chew and within one week, he was pushing me off the bed and getting right back on the couch. During the second week, he was bouncing off the wall as he greeted me at the door. By the sixth week, he was playing like a puppy...So a heartfelt, tear-filled thank you to the makers of Duralactin for helping my best friend.”

The story of dogs staying active, day after day

REAL PETS. GREAT RESULTS.

Hundreds of pet owners are seeing remarkable changes in their pets with Duralactin® and sharing their stories.

“Binky has been on Duralactin® and off other therapies, for about 5 weeks and the difference is amazing. She has energy, she wants to play and run around outside, and she hasn’t done that in a LONG time. It’s so good to see her comfortable again! Thank you Duralactin!”

Melody Solace, Binky’s owner

The ups and downs of inflammation

On the upside, inflammation:

- Is a response to injury to help protect the body from microorganisms
- Subsides naturally in most cases

But if it persists, it may result in:

- Chronic inflammation
- Progressive pain
- Damage to healthy tissues
- Poor quality of life

A naturally smart defense

Long-term management of inflammation can be a challenge. Corticosteroids and non-steroidal anti-inflammatory drugs (NSAIDs) may come with the risk of side effects that limit use.

Duralactin® takes an entirely different long-term approach:

- 🐾 Helps manage inflammation daily.
- 🐾 Not believed to interact with NSAIDs or steroids.
- 🐾 Ideal for aging animals or where other options may not be appropriate.

The science behind managing inflammation long-term

An active ingredient that sets us apart.

The active ingredient in Duralactin nutritional supplements is **MicroLactin[®]**, a specialized milk protein concentrate that's shown to inhibit neutrophils before they multiply, migrate and amplify the inflammatory process.

Duralactin[®] is unlike anything else

- 🐾 Applicable use against many different types of inflammation
- 🐾 Supported by 14+ years of clinical use with very few side effects reported
- 🐾 Easy once-a-day dosing in a choice of formulations
- 🐾 Pets love the taste
- 🐾 Results in 4-7 days; peak results in 10-14 days
- 🐾 Proven effective in multiple studies, both *in vivo* and *in vitro*

Canine Study¹

The efficacy of special milk protein concentrate (also known as MicroLactin[®]) was evaluated in a placebo-controlled, double-blinded, randomized, parallel trial of 50 geriatric, large breed dogs. **Overall improvement was seen by owners in 67% of the MicroLactin-treated dogs**, whereas only 35% of the owners of dogs in the placebo group reported improvement during the 8-week study period.

MicroLactin[®] The remarkable story of why it works

A profound discovery

In 1976, researchers discovered that dairy milk contains a natural anti-inflammatory substance during times of infection.

An X factor

This anti-inflammatory factor is secreted in milk to protect calves from tissue damage caused by inflammation.

Surprising twist

Further research revealed the factor is not normally present in milk, only during times of animal infection.

The anti-inflammatory link

Milk that contains the hyperimmune milk factor (HIMF) is shown to reduce inflammation in animals.

Capturing the power of HIMF

MicroLactin[®] is a unique concentrate of hyperimmune milk factor. HIMF was shown to reduce the number of neutrophils present at sites of inflammation by up to 81%.^{2,3}

"I have been using Duralactin® for many years and find it to be a great alternative for dogs that cannot tolerate other therapies. It's well tolerated and many owners report significant improvement while [their pets are] taking Duralactin."

Duralactin® Chewable Tablets

Available in 60 and 180 count sizes

Active Ingredient

- MicroLactin® (dried milk protein) 1,000 mg
- Chewable vanilla-flavored tablets dogs love
- Can be given directly or mixed with food

Directions for Use by Dog Weight

- 0-40 lbs 1/2 tablet twice daily
- 41-80 lbs 1 tablet twice daily
- 81+ lbs 1 1/2 tablets twice daily

Duralactin® Soft Chews

Available in 60 and 90 count sizes

Active Ingredient

- MicroLactin® (dried milk protein) 1,500 mg
- Tasty chicken-liver flavored soft chews

Directions for Use by Dog Weight

- 0-60 lbs 1 soft chew per day
- 61-120 lbs 2 soft chews per day
- 121+ lbs 3 soft chews per day

Duralactin® Joint Plus Soft Chews

Available in 60 and 90 count sizes

Active Ingredient

- MicroLactin® (dried milk protein) 1,500 mg
- Glucosamine HCl (marine source) 1,000 mg
- Methylsulfonylmethane (MSM) 800 mg
- Omega 3 (EPA) fatty acids 15 mg
- Omega 3 (DHA) fatty acids 10 mg
- Zinc 2.5 mg · Manganese 2.5 mg
- Vitamin E 6.0 IU
- Tasty chicken-liver flavored soft chews

Directions for Use by Dog Weight

- 0-60 lbs 1 soft chew per day
- 61-120 lbs 2 soft chews per day
- 121+ lbs 3 soft chews per day
