

Superior Pathogen Detection

A New Solution to the 'No Growth' Conundrum – Detect All Bacteria and Fungi with DNA Sequencing

The diagnosis of chronic and atypical infections is challenging. Conditions like otitis, chronic wounds, UTIs, pyoderma, or respiratory diseases involve many pathogens that are extremely difficult to culture. Biofilms are even unculturable.

MiDOG Offers the Detection of All Pathogens:

All Bacteria

All Fungi

Antibiotic Resistances

With Relative & Absolute Cell Counts

Detect & Quantify Pathogens including:

- | | | | |
|------------------------|--|--------------------------|------------------------------------|
| ✓ <i>Ureaplasma</i> | ✓ <i>Alcaligenes</i> | ✓ <i>Bacillus</i> | ✓ <i>Enterobacter</i> |
| ✓ <i>Mycoplasma</i> | ✓ <i>Chlamydophila felis</i> | ✓ <i>Klebsiella</i> | ✓ <i>Proteus</i> |
| ✓ <i>Mycobacterium</i> | ✓ <i>Yeast Malassezia</i> | ✓ <i>Acinetobacter</i> | ✓ <i>Corynebacterium</i> |
| ✓ <i>Nocardia</i> | ✓ <i>Coagulase-negative Staphylococci & Streptococci</i> | ✓ <i>Micrococcus</i> | ✓ <i>Enterococcus</i> |
| ✓ <i>Pseudomonas</i> | | ✓ <i>Fingoldia magna</i> | ✓ <i>Bordetella bronchiseptica</i> |

and much more!
